

## **Expertscape Ranks Top Doctors and Hospitals in Hemochromatosis**

*Leading Hemochromatosis Experts and Institutions Identified and Ranked Using Objective, Data-Driven Healthcare Tool*

**PALO ALTO, Calif. - Jan. 29, 2014 - [PRLog](#)** -- As part of its continuing program to highlight expertise and excellence in healthcare, Expertscape.com takes pleasure in recognizing the world's top institutions and medical specialists in the research and treatment of hemochromatosis.

Hemochromatosis is a common genetic disorder in which the body absorbs too much iron from the diet.

Although easily and successfully treatable if recognized early, its vague symptoms often result in a late diagnosis, after iron has overloaded the liver, heart, pancreas, joints, or skin and started to damage them.

For complex or advanced cases, a second opinion from someone with special interest in hemochromatosis may be necessary, as well as testing of blood relatives.

Among the individual experts and institutions demonstrating particular expertise in hemochromatosis, Expertscape.com would like to recognize the following nine (<http://www.expertscape.com/leaders/hemochromatosis>) for their pre-eminent contributions to its understanding and treatment:

### **World's Leading Experts – Hemochromatosis**
